Abstract (en)

[origin: WO2017060057A1] The invention relates to a device for loading and unloading a track, in particular a switch part, comprising an elongate traverse (12), which has a crane-hook holding apparatus (20), and at least two cross arms (30), which are provided on the traverse and extend transversely to the longitudinal axis of the traverse, wherein the cross arms (30) each have at least two holding elements (44) for the track, wherein at least one of the cross arms (30) is held in such a way that said cross arm can be moved along the longitudinal axis of the traverse (12).
