Abstract (en)  
[origin: WO2017059470A1] The invention relates to a furniture hinge (4) comprising the following: - a first stop part (5) for securing to a furniture body (2), - a second stop part (6) for securing to a movable furniture part (3), - at least one articulated lever (7) via which the first stop part (5) and the second stop part (6) are connected together in an articulated manner, said articulated lever (7) having at least one recess (11) for introducing a screwdriver (12), - at least one adjusting screw (17) for adjusting the position of the furniture hinge relative to the furniture body (2) and/or relative to the movable furniture part (3), said adjusting screw (17) being actuated by the screwdriver (12) introduced into the recess (11), - at least one spring device (18) by means of which the furniture hinge (4) can be moved into a completely closed position and/or into a completely open position starting from a specified angular position, - a control cam (16) which interacts with the spring device (18) at the specified angular position up to the completely closed position and/or the completely open position, and - an intermediate piece (14) via which the spring device (18) interacts with the control cam (16), wherein the intermediate piece (14) has an opening (20) which is flush with the recess (11) of the articulated lever (7) in at least one relative position of the articulated lever (7) such that the screwdriver (12) can be introduced through the recess (11) of the articulated lever (7) and through the opening (20) of the intermediate piece (14), and the adjusting screw (17) can thus be actuated.
