Abstract (en)  
[origin: WO2017060067A1] The invention relates to a refrigeration appliance, particularly a domestic refrigeration appliance, comprising a thermally-insulating housing in which at least one first and one second inner chamber (2, 3) are separated from one another by a thermally-insulating wall (8). The first inner chamber (3) is divided into a storage compartment (11) and an evaporator chamber (12). A passage (19) in the thermally-insulating wall (8) connects the evaporator chamber (12) to the second inner chamber (2). At least one closure element (56) for controlling the air exchange is housed, in said passage (19), between the evaporator chamber (12) and the second inner chamber (2).
