Abstract (en)
[origin: WO2017060220A1] The invention relates to a radio-controlled system for data transmission, which has a transmitting unit which transmits electromagnetic radio waves to a receiving unit by means of terrestrial transmission, wherein the receiving unit can be activated when the electromagnetic radio waves arrive, wherein the transmitting unit transmits a control notification or information to the receiving unit via the radio waves, such that a processing unit arranged on the receiving unit goes through a change of state, wherein the receiving unit can be deactivated after the end of the transfer of the electromagnetic radio waves.
