Abstract (en)  
[origin: WO2015135852A1] The invention relates to a method for producing an article of clothing (100), which comprises a textile main body (141) and functional elements (146) arranged on the textile main body, which method offers a large degree of design freedom with regard to the geometry of the functional elements and ensures good adhesion of the functional elements to the textile main body. According to the invention, the method comprises the following: producing the textile main body; providing a shaped part (156) having at least one functional-element recess (158) for accommodating a functional-element starting material (170); introducing the functional-element starting material (170) into the at least one functional-element recess (158); bringing the shaped part (156), which is provided with the functional-element starting material (170), and the textile main body (141) into contact; producing at least one functional element (146) connected to the textile main body (141) in a bonded manner from the functional-element starting material (170).
