Abstract (en)

[origin: WO2011095715A2] The invention relates to an element (1) and a fixing device (100) comprising an element (1) and a complementary element (13), said element (1) comprising a lateral engagement hook (4) that can be engaged, in a direction of engagement D, with a lateral engagement opening (14) provided on said complementary element (13), said element (1) being provided with a lateral hooking opening (7) that can receive at least one lateral hooking finger (15) provided on said complementary element (13). The invention is characterised in that said lateral hooking opening (7) has a general V-shaped form, the open part of said V facing the same direction as the direction of engagement D and the tip facing the opposite direction in order to enable a "relaxed" position wherein the lateral hooking finger (15) is in the open part of the V, and a "tight" position wherein said lateral hooking finger (15) is in the tip of the V.
