Abstract (en)  
[origin: CN108327038A] The invention relates to a continuous press for producing wood-based boards. The press has a circulating upper band (3) and lower band (4) under the circumstance of forming an extrusion gap (5), the upper band and lower band can be extruded towards a cushion made of wood fiber material by virtue of at least partially heatable pressing plates, the pressing plates can be supplied with heat carrier media via input and output pipelines (11, 24.1, 24.2, 25.1, 25.2) extending along the press, the upper band and lower band are such extruded that pressure can be applied to at least part of the pressing plates (7, 8) via an actuator (9) supported on a frame (13), and at least one input and/or output pipeline (11, 24.1, 24.2, 25.1, 25.2) of heat carrier media used for heating the pressing plates (7,8), which longitudinally extends along the press, is supported on a sliding support (28).
