Abstract (en)
[origin: EP3361206A1] A butt (1) for a firearm (100, 101) comprising a main support structure (2) suitable to be integrally associated to the barrel (102) and to the firing mechanism (103) of the firearm (100, 101). The butt (1) further comprises a butt plate (3) suitable to absorb the recoil generated by the firearm (100, 101) and a unit (4) for connecting the main support structure (2) to the butt plate (3). Such connection unit (4) comprises a male tubular element (5) and a body (6) in which there is obtained a female housing (7) with substantially longitudinal development and provided with an inlet opening (71) and a bottom (72) defined on the opposite side of the inlet opening (71), wherein such female housing (7) is suitable to receive the male tubular element (5), the body (6) is associated to the main structure (2) and the male tubular element (5) is associated to the butt plate (3), or vice versa. The butt (1) further comprises a first elastic damping body (8) arranged between the bottom (72) and a first abutment element (51) defined in proximity of a first end (5a) of the male tubular element (5) suitable to be arranged facing such bottom (72), wherein such first elastic damping body (8) is configured to be compressed and absorb the recoil generated by the firearm (100, 101).
