Abstract (en)

A cutting system includes a controller. The controller includes: a storage processor storing a target list that is a list of target identifiers designated by a machining program; a reading processor configured to read, before cutting is performed, identifiers of workpieces held in a holder; an identifier determination processor configured to determine whether the target identifiers are included in the identifiers read by the reading processor; a cutting control processor configured to control cutting upon determination by the identifier determination processor that the target identifiers are included in the identifiers read by the reading processor; and an error notification processor configured to provide an error notification upon determination by the identifier determination processor that at least one of the target identifiers is not included in the identifiers read by the reading processor.
