Abstract (en)
[origin: WO2017064049A1] The invention relates to a helmet. Furthermore, the helmet has a first strap (5), which has a first and a second strap section (9, 10), fastened to a first side (4) of a helmet crown (2). The helmet furthermore has a first coupling body (6), which deflects the first strap (5) during use. The first coupling body (6) and the first strap (5) can be displaced relative to each other. The helmet furthermore comprises a first fastening body (7), arranged adjacent to the first coupling body (6) and through which the first strap (5) is guided and which exerts a clamping force on the first strap (5). The first fastening body (7) and the first strap (5) are displaceable relative to each other, despite the clamping force present there between. The first fastening body (7) and the first coupling body (6) are designed separately from each other. In addition, the helmet has a chin strap (8) which is connected to the first coupling body (6).
