Abstract (en)

[origin: WO2017064362A1] The invention relates to a system for installation in a sauna room or any similar room with the purpose to generate under automatic control a percentage of humidity higher than normal in the steam room or any similar room and consequently better prerequisites for a relaxing sauna/steam room experience. The system comprises a nozzle unit (24) which is installed in the stone space (13) of the sauna stove (14) or in any other heat source, and from where water can be sprayed, and an automatic control system, by means of which a humidity and temperature sensor (1) measures the properties of the sauna room, thus adjusting by means of automatic controls pre-set standard moisture and temperature values.
