Abstract (en)

[origin: WO2017064275A1] A setting mechanism for a dosing device, in particular for dosing pharmaceutical or therapeutic liquids, the setting mechanism comprising at least four interconnected rotatable elements, wherein: at least two rotatable elements (511, 502) are rotatable during setting or correcting a dose for the dosing device; a first rotatable element (511) is a receiving element and comprises corrugations (514); a second rotatable element (502) or a third rotatable element (531) or a fourth rotatable (560) element comprising corrugations coupled with the corrugations of the first rotatable element; wherein said corrugations are shaped such that they enable rotation of said at least four rotatable elements during delivering the dose by the dosing device.
