Abstract (en)

[origin: WO2017063623A1] The aim of the invention is to further develop filling devices for filling a medical bag, in particular with respect to a solid main body or solid filling block. To achieve this aim, the invention proposes a filling device for filling a medical bag with fluids, the device comprising a main body with fluid channels and valve seats, on which valve devices can be arranged in order to adjust volumetric flow rates of fluid flowing through the fluid channels, the main body being at least partially produced by an additive manufacturing process.
