Abstract (en)
[origin: WO2017063869A1] The invention relates to a refrigeration appliance, particularly a domestic refrigeration appliance, comprising a body and a door which together delimit a storage chamber, wherein the body comprises a cavity delimited by an outer wall and an inner wall and filled with insulation material, and also comprises a machine space for receiving assemblies. To improve such a refrigeration appliance, particularly to obtain simpler production, the invention suggests that a machine space wall element delimiting the insulation material comprises an expansion opening.
