Abstract (en)
A supporting base of a drinking container is connectable with a bowl (4A, 4B), wherein the bowl (4A, 4B) has an opening (42B) and an outer periphery circumferentially provided with an annular groove (41A) adjacent to the bottom side of the bowl (4A, 4B). The supporting base includes a connecting portion (1), whose top and bottom ends are provided with a top portion (2) and a bottom portion (3) respectively. The top portion (2) is provided with a coupling portion (23) for coupling with the annular groove (41A) of the bowl (4A). The bottom portion (3) can be placed flat on a flat surface and has a bottom side concavely provided with an upwardly extending receiving room (31). The receiving room (31) is provided therein with a positioning portion (33) configured to press against and thereby secure in position the rim of the opening (42B) of the bowl (4B).
