Abstract (en)
A garden device, comprising a waterfall object and a waterfall water supply, wherein said waterfall object comprises an enclosure, including a floor, a ceiling, a front wall, a rear wall and two opposite lateral side walls, wherein the front wall is configured to function as a water overflow near the ceiling such as to form a water outlet nozzle together with the ceiling, wherein the waterfall object comprises a light source arranged upstream relative to the water outlet nozzle, wherein the light emitted by the light source can illuminate the water from behind at the location of the overflow, in such a manner that the water functions as a light guide for guiding the light in a downward direction, wherein one of the side walls comprises an insertion opening near the ceiling and the rear wall for inserting the light source in its longitudinal direction into the enclosure.
