Abstract (en)

An operation monitoring device for monitoring operation and drive conditions of a passenger transport device, including a drive control portion configured to control a drive source for driving the passenger transport device, and a datalogger portion connected to the drive control portion, wherein the datalogger portion is configured to generate and store a datalogger file based on output data and control signals of the passenger transport device, wherein at least a part of the output data and control signals is obtained from the drive control portion, and provide the datalogger file to an external server for at least one of condition monitoring and fault search processing.
