Abstract (en)  
[origin: WO2014048966A2] In order to achieve secure and reliable stackability, a bundle of compressed gas cylinders according to the invention is equipped, on the upper horizontal surface of the framework, said horizontal surface bounding the bundle of compressed gas cylinders on the upper side, with a plurality of centring elements which protrude from the upper horizontal surface and, in the stacked state, engage in one or more centring openings which are arranged in a base surface of the framework of a bundle of compressed gas cylinders positioned thereabove. The centring elements can be designed here so as to taper for automatic centring, and a plurality of centring elements which, in the stacked state, engage in an individual centring opening on the base surface can be provided.
