Abstract (en)  
[origin: WO2017067566A1] The invention relates to a shoe (1), comprising a sole (2) and a shoe upper (3), wherein the sole (2) has a sole part (4) with a base region (5), from which at least one support part (6, 6', 6'') extends upwards during the intended use of the shoe (1), wherein the shoe upper (3) has a sock-type section (7) connected to the sole (2) for receiving the foot of the wearer. According to the invention, in order to obtain improved contact of the shoe with the foot of the wearer, the at least one support part (6, 6', 6'') covers the sock-type section (7) on the shoe outer side, wherein there is no secure connection between the support part (6, 6', 6'') and the sock-type section (7) over at least one section of the support part (6, 6', 6''), and both the at least one support part (6, 6', 6'') and the sock-type section (7) are surrounded by a tensioning element (8), which tensions at least some sections of both the support part (6, 6', 6'') and the sock-type section (7) against the foot of the wearer of the shoe.
