Abstract (en)
[origin: CA3001769A1] The invention relates to a method for beveling veneers (14), characterized in that an edge (26) of the veneer (14) is pressed by a pressure shoe (44) extending along said edge against a base (22) in such a way that the edge projects over the base and in that a trimming device (28) and a grinding tool (30), which has a grinding surface set at an angle to the plane of the veneer, move along the edge (26) of the veneer, such that an edge strip (50) of the veneer is cut off by the trimming device (28) and the veneer is beveled by means of the the grinding head (30).
