Abstract (en)

[origin: WO2017067785A1] The invention relates to a touch-sensitive operating display (1, 8, 12, 18) for setting a program of a household appliance, to a household appliance (14, 15) comprising such an operating display, to a computer program product, and to a corresponding method (M). The household appliance has multiple different programs, each of which can be defined using multiple parameters that are interdependent. The operating display has multiple display regions (2, 3, 4), each of which represents a parameter. By touching the operating display, the parameters of the display regions (2, 3, 4) can be changed. However, a change of a parameter of one display region leads to the simultaneous change of the parameter of another display region.
