Abstract (en)
[origin: WO2017067546A1] The application relates to a ground covering system for playgrounds, sports areas and the like, having a superstructure and a substructure, wherein the superstructure comprises a ground covering panel (1) in which at least one granular cover (3) consisting of a polymer, preferably a mixture of comminuted rubber and an elastically curing polymeric binder, is formed, and wherein the substructure comprises a ground covering mesh (2) which is formed at least substantially from a polymer, preferably a mixture of comminuted rubber and an elastically curing polymeric binder. The application further relates to a ground covering for playgrounds, sports areas and the like and to a method for forming same.
