Abstract (en)  
[origin: KR20170099350A] The present invention provides a magnetron cooling fin unit. More specifically, the plate-shaped magnetron cooling fin has one or multiple corrugated areas on the body to enhance the cooling efficiency. According to a part of the disclosed embodiments of the present invention, processed corrugated areas are formed to widen the air contact area around through-holes having positive electrode parts of a magnetron unit passing therethrough, thereby enhancing the cooling efficiency.
