Abstract (en)

[origin: WO2017067690A1] The invention relates to an electrical storage means (2) comprising a housing (4), an accumulator (14) arranged in the housing (4), an inverter (22) arranged in the housing (4) and electrically connected to the accumulator (14), an energy outlet (26) arranged in the housing (4) and electrically connected to the inverter (22), a charge controller (16) arranged in the housing (4) and connected to the accumulator (14), and an energy inlet connected to the charge controller (16). A low-cost circulation system can be provided by designing the energy inlet (6) and the charge controller (16) for higher electrical output than the inverter (22) and the energy outlet (26).
