Abstract (en)

[origin: CN108454913A] In manufacturing of a package 10 for cigarettes, in particular a flip box, the package is produced in a region of a folding turret 16 to a large extent. However, the package is conveyed along a package line (17) in a manner that lateral folding sheets are on intermediate folded position. Glue is arranged for the folding sheets in the region of the package line, and the package line is delivered to a forming turret (18) to complete packaging. In the region of the forming turret, the folding sheets provided with the glue are placed in a position conforming to package.
