Abstract (en)  
[origin: CN108506892A] The invention relates to a light cover (20) and a light. The light cover is at least partially light-transmitting and is designed to be connected with a groove-shaped shell part (50) to form a closed light shell, the light cover is basin-shaped and has a surrounding splash-proof edge (25) pointing outward in a region arranged for connection with the groove-shaped shell part (50), and the splash-proof edge is disconnected in a locking region (30) arranged for being locked with the groove-shaped shell part (50). The cover (20) has a connecting piece (29) protruding outward in a region of a fracture (28), and the connecting piece extends from the splash-proof edge (25) to a locking protrusion (31) arranged for being locked with the groove-shaped shell part (50), thereby filling the fracture of the splash-proof edge (25) through the connecting piece (29) and the corresponding locking protrusion (31).
