Abstract (en)
The present invention provides a rain-resistant vent. The vent comprises a support frame having an inner perimeter; a set of blades arranged in an array, a first end of each blade being attached to a corresponding first part of the frame, a second end of each blade being attached to a corresponding second part of the frame, a first substantially flat portion forming an initial part of a cross-section of each blade, and the first substantially flat portion is followed by a ridge or valley portion, and at the first end of each blade the first substantially flat portion is at least partly separated from the inner perimeter by an opening allowing water to drain from the first substantially flat portion onto the inner perimeter.
