Abstract (en)  
[origin: WO2017072112A1] The present invention relates to a hair dryer (1) which includes a tubular body along a longitudinal axis with, at the opposite ends thereof, an air inlet and an air outlet, and a turbine (2) located inside said tubular body which, during use, is rotated by a motor (8) about the direction of the longitudinal axis, making it possible to suck in air via the inlet and to discharge air via the outlet of said tubular body, the hair dryer (1) comprising an air-inlet bend (3) comprising one or more blades (4).
