Abstract (en)

[origin: WO2017072624A1] Methods include cutting an inner liner (30) that has an outer surface and an inner surface to form an opening (54) of an inner package. First, an insert (60) is applied to the outer surface of the inner liner. Thereafter, a resealable label (45) is applied over both a portion of the insert and a portion of the outer surface of the inner liner. The inner surface of the resealable label has a sealing area (46) and a non-sealing area (47) and only the non-sealing area is disposed on the insert. A bundle of consumer goods is formed by wrapping the consumer goods with the inner liner. A container (10) is formed around the bundle of consumer goods so that the insert is positioned between the inner liner and the container. Containers formed using such methods are also disclosed.
