Abstract (en)
[origin: WO2017072691A1] The invention relates to a system for transporting a railway switch (12), comprising a transport car (10) having a longitudinal direction (100) and a loading gauge of a given width, measured perpendicularly to the longitudinal direction (100). The transport system also comprises at least one first removable or retractable side handling platform (24) capable, when the transport car (10) is at a stop, of being in a position for sideways use of a first side of the transport car (10), located outside the loading gauge of the transport car (10) and allowing a worker to access the railway switch (12).
