Abstract (en)

[origin: EP3369678A1] A structure (115) for roof (110) of a container (100) for the intermodal transport of products is proposed. The container (100) comprises a casing (105) delimiting a cavity adapted to house the products to be transported. The structure (115) comprises: at least two openings for accessing said cavity, and at least two doors (205 n) each one associated with a respective one of said at least two openings and each one comprising a first (205 AS n) and a second (205 AD n) hinged doors opposite to each other, each door being selectively operable between an opened position that allows insertion from above of the products to be transported into the cavity through the respective opening, and a closed position that prevents insertion of the products into the cavity and exposure thereof to impurities and atmospheric agents during the transport.
