Abstract (en)  
[origin: WO2017077221A1] The invention relates to a hairstyling device (1) including a first (2) and a second (3) arm configured to form a clamp, a first (7) and a second (8) treatment surface that face one another, on said arms respectively, for pressing a lock of hair during clamping, and a first comb (11) configured on the first arm upstream of the first treatment surface in order to suitably distribute the lock between the two treatment surfaces and to place tension on the lock before the passage thereof between said treatment surfaces, at least one of the two treatment surfaces including heating means. The invention is characterized in that the first comb includes teeth (13) that are mutually spaced apart by a constant spacing (p) of between 0.50 mm and 8.00 mm, said teeth having the shape of a pyramid with a rectangular base.
