Abstract (en)

[origin: WO2017078523A1] The present invention relates to a device for cutting an elongate object, such as an offcut, comprising: - a wall with a passage opening which is configured to feed therethrough the elongate object to be cut; and - a blade movable along the passage opening substantially parallel to the wall, wherein the passage opening is at least partially clear during a stroke of the movable blade along the passage opening. The invention further relates to a machine provided with such a cutting device.
