Abstract (en)

[origin: WO2017076949A2] The invention relates to a lamination machine (01), said lamination machine (01) comprising at least one material source (100) which is in the form of a sheet feeder (100) for material to be laminated (02). According to the invention, the lamination machine (01) has at least one lamination unit (310) and said lamination machine (01) comprises at least a first lamination source (320) for laminating material (321), the at least one first lamination source (320) being designed as a first roll changer (320) and having at least two first roll holding locations (322).
