Abstract (en)
[origin: WO2017083181A1] A ceiling system including a ceiling structure suspended in an interior space. The ceiling structure includes a perimeter frame defining a central opening and a support grid having a plurality of intersecting struts defining a plurality of grid openings. The perimeter frame may include a fabric gripping member for retaining the tensioned fabric sheet. The support grid is disposed within the central opening and coupled to the perimeter frame. An acoustic ceiling panel is disposed in one of the grid openings. A tensioned fabric sheet is coupled to the perimeter frame to close the central opening. The tensioned fabric sheet may wrap around an outer surface of the perimeter frame. In some embodiments multiple tensioned fabric sheets may be coupled to the perimeter frame each closing the central opening to create a desired effect.
