Abstract (en)

[origin: WO2017108450A1] The invention relates to a fitting arrangement (10) for a lift-and-slide element (12) such as a lift-and-slide door or a lift-and-slide window which comprises a fixed frame (14) and a leaf/sash which can be displaced in a displacement direction (41) relative to the frame (14) in a raised position along a lower running track, wherein an adjustment element (40) is provided which is mounted so as to be movable in a displacement direction (41) between a lowering position and a raising position, and a rail strip (38) having the running track is provided on the frame side and is mounted so as to be adjustable in a movement transversely to the displacement direction (41) between a lowered position and a raised position, wherein the adjustment element (40) has arranged thereon at least one deflection element (54) by means of which a movement of the adjustment element (40) from the lowering position into the raising position can be deflected into an adjustment of the rail strip (38) from the lowered position into the raised position. The invention further relates to a lift-and-slide element having such a fitting arrangement.
