Abstract (en)

[origin: WO2017077491A1] A hinge for the controlled rotatable movement of a closing element, such as a door, a window, a shutter or the like, anchored to a stationary support structure, such as a wall, a floor, a frame or the like. The hinge comprises: a hinge body (10) and a pivot (20) reciprocally coupled to rotate around a first axis (X); a working chamber (13) defining a second axis (Y) substantially perpendicular to the first axis (X); a plunger element (50) slidable along the second axis (Y) between a position proximal to the end wall (14) of the working chamber (13) and a position distal therefrom.
