Abstract (en)
[origin: WO2017077060A1] The invention relates to a hydraulic device for a rail vehicle comprising a tank region (110) for a hydraulic fluid, a motor (122) having a pump (124) for pumping the hydraulic fluid, a hydraulic connection panel (130) for providing hydraulic fluid paths (132) and for holding hydraulic components (134), a control region (140) for controlling the hydraulic components (134), and a housing (150). The tank region (110) and the control region (140) are arranged on opposite sides of the hydraulic connection panel (130). The motor (122) is arranged together with the pump (124) on one side of the hydraulic connection panel (130).
