Abstract (en)

[origin: WO2017076469A1] The present invention relates to an induction cooker (1) comprising a glass top (2) which includes one or more cooking zones (3) each for inductively heating a cooking utensil (4) at the heating level that is respectively selected by the user and a user-interface (5) for allowing the user to select for each heating zone (3) the heating level from a range of heating levels. The induction cooker (1) of the present invention further comprises one or more optical devices (6) each adapted to project an image (7) onto the circumferential wall (8) of the cooking utensil (4) that is placed on the respective cooking zone (3), wherein the image (7) shows information which relates to the operational state of the respective cooking zone (3).
