Abstract (en)
[origin: WO2018162575A2] The invention relates to a traffic monitoring arrangement (10) with a housing (20) comprising a first housing component (21) and at least a second housing component (22), wherein said traffic monitoring arrangement comprises a flexible stop means (40), by which the first housing component (21) and the second housing component (22) are connected to each other. Furthermore, the traffic monitoring arrangement (10) comprises at least one predetermined breaking point (222, 29) which, with respect to a local connection region (221) provided by the second housing component (22), on which the flexible stop means (40) is fixed, is located on a side of the traffic monitoring arrangement (10) facing away from the first housing component (21).
