Abstract (en)
Cantilever panel support apparatus, comprising - a longitudinal body made from an extruded metal profile, to be fixed to a bearing structure, defining a laterally-open longitudinal seat, into which an end of the panel to be supported is adapted to be inserted, said longitudinal seat being delimited by a sidewall to be fixed to the bearing structure, a base extending in a cantilevered fashion with respect to said sidewall, and a ceiling which also extends in a cantilevered fashion from said side, placed above said base, - a first contact zone with the upper face of the panel, provided on said ceiling, - a second contact zone with the lower face of the panel, provided on said base, - a panel locking device comprising at least one pressing element adapted to press, when the panel is put into place, against the lower face of the panel, so that the panel is pushed towards said ceiling;
