Abstract (en)
Screen device, comprising a screen roller which is rotatable on an axle with a screen, which can be rolled up onto and unrolled from the former, and a support element (1) on its end side for fastening a fastening body (2) in an interior space, via a fitting movement perpendicular to the axle, and comprising further guide elements (3, 4) on the fastening body (2) for guiding the fitting movement, at least one securing element (5) which is provided so as to be movable between a first position and a second position for securing the support element (1), one or more spring-mounted elements (8) which force the securing element (5) to its first position, wherein the securing element (5) comprises a rigid base body (6) which comprises a projecting rigid fitting element (7) and/or a fitting space and wherein a guide element (3) comprises a corresponding fitting space (9) and/or a corresponding projecting rigid fitting element.
