Abstract (en)  
A refrigerator is disclosed, including a case body (10) enclosing a storage space, and a heat insulation wall (20) disposed within the storage space. The storage space is divided into mutually isolated storage compartments (10a) by the heat insulation wall (20). The heat insulation wall (20) includes a vacuum glass module, and the vacuum glass module includes at least two glass layers (21) disposed at a spacing and a vacuum heat insulation cavity (22) located between adjacent glass layers (21). This solution can reduce the thickness of the heat insulation wall and improve the storage performance of the refrigerator.
