Abstract (en)
[origin: EP3373551A1] The disclosure relates to apparatuses and methods for a computer network comprising hosts accessible by directory users whose user identity information is maintained in a user information directory. The apparatus comprises at least one processor, and at least one memory for storing instructions that, when executed, cause the apparatus to manage information of configurations for attribute based filtering of access requests by the directory users for a plurality of hosts and separately from the user information directory.
