Abstract (en)

[origin: WO2017081383A1] The invention relates to a sweeping brush comprising a head (20) bearing elongate sweeping members, each sweeping member having an end connecting to the head (20), from which head the sweeping member projects from a bristled face to a free end of the sweeping member, characterised in that it comprises a first series of sweeping members, termed first sweeping members (22), the connecting ends of which are arranged on the bristled face along at least one curve, termed the first bristled curve, and a second series of sweeping members, termed the oblique sweeping members (23), arranged so that each oblique sweeping member (23) passes between two adjacent first sweeping members (22) on the first bristled curve.
