Abstract (en)

[origin: WO2017079917A1] A telescopic support device for furniture comprises at least three profile parts and a motor unit (5). The three profile parts includes a central profile part (3), a first profile part (2) adjacent to the central profile part (3) and a second profile part (4) adjacent to the central profile part (3) and opposite the first profile part (2), wherein said at least three profile parts are telescopically moveable with respect to each other. The motor unit (5) is mounted with the central profile part (3) such that the motor unit (5) moves in unity with the central profile part (3), wherein the motor unit (5) is in driving engagement with the first profile part (2).
