Abstract (en)  
[origin: WO2017080981A1] The invention relates to a medication system with a medication tray (1) comprising a substantially rectangular tray plate (9) comprising a number of individual receiving points (10), separate from one another and running in rows, and comprising a plurality of containers (2) containing medications, which containers are positioned in the receiving points (10) to be individually removable, wherein plastic film (17), which is provided with perforations along the outer contours of the containers (2), is sealed to the container edges. The tray (1) is a plastic injection-moulded part, wherein each container (2) is individually provided with a plastic film sealed to the container edge, which plastic film is obtained from a single, flexible plastic film, provided with perforations (18) along the outer contours of the containers (2), and which has been fused only along the container edges, and whose non-fused part, forming a film grid (17a), has been removed by separating in the area of the perforations (18).
