Abstract (en)
[origin: WO2017080745A1] The invention relates to a method for producing a vehicle component, comprising the following steps: producing a support body (1) provided with holes (8), applying fibers (12) to the support body (1), inserting the support body (1) provided with the applied fibers (12) into a cavity (14) of a molding tool (15), filling the cavity (14) holding the support body (1) provided with the applied fibers (12) with a molding mass (19), which flows through the holes (8) of the support body (1), hardening the molding mass (19) in order to form a molded part (20) comprising the support body (1) provided with the applied fibers (12), and removing the molded part (20) from the molding tool (15).
