Abstract (en)

[origin: WO2017081592A1] Described is a unit for feeding information leaflets (1) to a packaging machine (M), comprising: a feed surface (2) designed to feed along a feed line (A) the information leaflets (1) in succession, subdivided into groups or packs (B) held by a clip (3); a retaining station (4) configured for temporarily holding a pack (B) and equipped with pushing means (5) movable transversely to the feed line (A) between a non-operating position, wherein the pushing means (5) are spaced away from the pack (B), and an operating position, wherein the pushing means (5) push a first lateral face (B1) of the pack (B) for moving at least one information leaflet (1) of the pack (B) transversally to the feed line (A); and an extractor (6) configured for extracting the clip (3) of the pack (B) of leaflets, which is movable, in synchrony with the pushing means (5), between a non-operating position, wherein the extractor (6) is moved away from the clip (3), and an operating position, wherein the extractor (6) intercepts a stretch of clip positioned at the first lateral face (B1) and moves away, at least partly, the clip (3) from the pack (B).
