Abstract (en)

[origin: CA3003214A1] The invention relates to a method and device for producing and withdrawing a web-like product (2) using a production machine (1) and two clamp carriers (7.1, 7.2) with clamps (10.1, 10.2). The clamp carriers (7.1, 7.2) are driven back and forth parallel to a withdrawal direction of the web-like product (2). The clamp carriers (7.1, 7.2) can each be driven using a pair of drive spindles (14.1, 14.2) which are arranged in such a way that the web center of the web-like product (2) runs within the device (6) in an area between the two drive spindles (14.1, 14.2) of the respective clamp carriers (7.1, 7.2). The method is characterized in that the web-like product (2) is produced with successive main sections (4.1, 4.2, 4.3, 4.4) and auxiliary sections (3.1, 3.2, 3.3, 3.4, 3.5), and the clamps (10) are controlled in such a way that the opening and closing of the clamps (10) only takes place in the periods of production in which an auxiliary section (3.1, 3.2, 3.3, 3.4, 3.5) of the web-like product (2) is produced.
